Put each equation in Slope-Intercept Form and graph.

Problem	Give Equation
15	$2x + y = 4$
16	$-3x + y = -6$
17	$x - 2y = 8$
18	$4x + 2y = -8$
19	$-x + 3y = 9$
20	$5x - y = 5$
21	$-2x - y = -2$
22	$6x - 2y = 4$

Put each pair of equations in Slope-Intercept form separately, but graph both them on the same graph.

23	$-16x + 4y = 4$	$-16y + 4x = 32$
24	$12y + 9x = 96$	$-4y - 3x = -44$
